

# DATA MINING

Dig deeper into your claims data

Your organization is committed to paying claims quickly and correctly. Yet, it's difficult to avoid letting millions of dollars a year slip through the cracks—cracks caused by older claims technology, ever-changing CMS rules and regulations, and a multitude of contractual terms.

As your consultative partner, Discovery Health Partners (Discovery) offers an AI-based analytics and multi-dimensional comprehensive Data Mining solution that helps identify and recover improper claims payments associated with adjudication errors, billing errors, and contract language. More importantly, our solution works to prevent the reoccurrence of these errors in the future—giving you the information you need to facilitate smoother review processes.

With Discovery's Data Mining, you can:

- Gain critical business intelligence to better identify overpayments and their root causes across multiple years and categories
- Go deeper into your data to uncover and recover previously missed overpayments
- Use intelligent algorithms that continually learn and evolve with each claim

## Ways we help

- 1. Technology:** Our pre-pay and post-pay data mining solution runs on an integrated payment integrity platform that increases the effectiveness and precision of identifying claims errors.
- 2. Expertise:** Our team of industry experts holds a deep knowledge of claims processing and continually monitors the industry for trends and regulations that can impact our clients.
- 3. Efficiency:** Save time and money with actionable intelligence to correct claims, prevent future errors, and streamline your claims workflows.

Discovery's Data Mining solution supports your unique plan policies by combining industry-standard and custom concepts to facilitate a smoother review process—decreasing your administrative expenses and overall per-member, per-month (PMPM) spend.

## Who is it for?

Payment integrity directors, health plan analysts, and analytics staff at health plans, including at-risk commercial, Medicare Advantage, Medicaid Managed Care, state Medicaid plans and third-party administrators (TPAs).

## What does it do?

Blends flexible, sophisticated analytics and logic with human intelligence to help catch and prevent overpayments according to your specific business processes.

## How does it work?

From implementation through delivery and reporting, we put health plans first in everything we do to ensure our Data Mining solution is fully aligned with your plan.

## Key metrics

Conversion/validity/acceptance rate

- 90% with system access
- 65% without system access
